

Call for Proposals

Keywords: Media Arts, Interaction Design, Java

Effort: approximately 4 months

We are searching a person with good technical skills in the field of Java Programming / Interaction Design / Media / Computer Graphics / Networking. The work is based on user interaction improvement and integration of network interfaces for a graph editor designed for the application in non technical sciences and arts for implementing large knowledge networks. The application has already been used in notable exhibitions (e.g. Ars Electronica Festival). A further aim is the correlation of the semantic graph data with location-tagged content represented within a map application. You are expected to work together with another programmer who is responsible for the implementation of this geo-centric system.

You should also be interested in working and cooperating with a team consisting of artists and social scientists with different skill sets. The project was initiated by an art association situated in Linz and Vienna (www.meta-don.org/newborder). The project constitutes an international cooperation between Austria and Serbia and will be carried out by Austrian and Serbian artists and scientists.

So, if you are interested in media arts / artist collaboration and you have the necessary skills send an email to: hannes.weingartner@gmx.net

We are looking forward to cooperate with you!
